

HOW TO SETUP IPHONE SATELLITE TEXTING

Must be on iPhone models 14 or higher with iOS 18 or later

- Need to be in SOS mode, no cellular or Wi-Fi coverage
- To connect to a satellite, you need to be outside with a clear view of the sky and horizon.

When your iPhone detects that you're outside of cellular and Wi-Fi coverage, it alerts you

- Two additional ways to access satellite features:
 - **Control Center:** swipe down from the top right corner of iPhone to open Control Center, then tap the (📶) cellular button on the right. Tap Satellite, then choose messages via satellite (or another satellite feature)
 - **Settings App:** Open settings, then tap satellite and choose Messages via satellite (or another satellite feature)

Try the Satellite Connection demo — To learn how to connect to a satellite, open the Settings app > Apps > Messages, then tap Satellite Connection Demo.
